USER INTERFACE DESIGN

EX No: 6

UI Design Using RAD Model for SmartTrip: A Tourism Mobile Application Prototype

---

AIM:

To simulate the lifecycle stages of UI design using the RAD (Rapid Application Development) model and develop an interactive tourism mobile application prototype using Axure RP.

INTRODUCTION:

RAD (Rapid Application Development) is a software development methodology that emphasizes rapid prototyping, iterative development, and continuous user feedback. It is best suited for UI/UX-intensive applications such as mobile apps.

In this experiment, a tourism-based mobile application named **SmartTrip** is designed to provide personalized travel recommendations, trip planning, and booking features.

PHASE 1: REQUIREMENTS PLANNING

1. Identify Key

Features Navigation:

- Home (Onboarding Screen)
- Personalization Screen
- Recommended Trips
- Destination Details
- Booking Confirmation

User Actions:

- Explore destinations
- Select preferences
- View recommendations
- View trip details

- Start trip
- View itinerary

---

2. Functional Requirements

1. User can access onboarding screen
2. User can select travel preferences
3. System provides personalized recommendations
4. User can view destination details
5. User can initiate trip
6. System confirms booking

PHASE 2: USER DESIGN

Tool Used:

Axure RP

Wireframes Designed:

- Onboarding Screen
- Personalization Screen
- Recommended Trips Screen
- Destination Details Screen
- Booking Confirmation Screen

Interactions Implemented:

- OnClick navigation between pages
- Button hover effects (color + zoom)
- Smooth transitions between screens
- Interactive UI elements

SCREENSHOTS

Figure: SmartTrip Mobile Application Screens

PHASE 3: CONSTRUCTION

1. Interactive Prototype

- Connected all screens using Axure interactions
- Navigation flow implemented:
  Home → **Personalization** → **Recommendations** → **Details** → **Confirmation**

---

2. Dynamic Features

- Button animation (zoom effect)
- Hover color changes
- Fade-in text effects
- Real-time UI simulation

---

3. Testing

- Prototype tested using preview mode
- Improved UI clarity and interaction

PHASE 4: CUTOVER

1. Finalization

- Completed interactive UI prototype
- Ready for implementation

---

2. Documentation

- User interface documented
- Interaction flow explained

RESULT:

Thus, the tourism mobile application **SmartTrip** was successfully designed and developed using Axure RP following the RAD model. The prototype demonstrates an interactive and user-friendly travel planning system.
